

Top 5 Reasons Why *VE Desktop for HP Software*

1

Improve Application Performance Testing Accuracy

- Real-world conditions can be accurately emulated
- Reduce having to roll back applications from production, or re-release them.

2

Eliminate the Need to Deploy Load Generators Remotely

- Minimize cost of testing network impact on applications in remote locations
- No coordination issues with remote hardware or network teams
- Tests can be run, reconfigured, and run again without impacting the production network during peak hours

3

Add Network Impairments to Traffic Generation

- Simulate all required network attributes including latency, packet loss and network footprints over multiple routes
- Measure response time goals in various locations to meet SLA's

4

User Experience Validation Using LoadRunner Scripts

- Simulate multiple users accessing applications for real world business transactions
- No script edits required

5

Identify the Root Cause of Performance Problems

- Add a new dimension of insight into the performance of individual transactions across the network by pinpointing the root cause of performance problems
